Final Report

1. Introduction

This report presents my internship, “Applied Linguistics in Public Administration and Education”, which I completed with the Revenue Administration of Hyderabad Rural as part of my BS English Applied Linguistics degree at the University of Sindh, Jamshoro. The internship ran for 16 days, from 10 September to 14 October 2026, with total number of 90 hours spent, above the planned 60–80 hours. My internship had two components the first was Non-Teaching/Institutional that ran for about Days 1–12, 66 hours and the second one was Teaching component that ran for Days 13–16, 24 hours.

My objective for this internship was to connect Applied Linguistics with real language use in public administration and education. I aimed to observe use of language, the choice of language and the multilingual communication to relate language teaching principles to classroom and professional communication and to develop a habit of turning theory to practice in real life classes and to keep exact records of the activities I do. This internship placement suited these goals because the office is a place where Sindhi, Urdu and English all these languages are used with the public and I expected to gain a clearer and deeper understanding of institutional communication, and try to connect sociolinguistics with observed practice, and to produce a report supported by legit records.

2. Organization Profile:

The Revenue Administration of Hyderabad Rural is a government office in Sindh that deals directly with members of the public and I was supervised by Sir Gohar Masroor, Assistant Commissioner, and Sir Junaid Qazi, Mukhtiarkar (UT). My university coordinator was Madam Bakhtawar Jaleel.

On my first day, the Assistant Commissioner gave me an introduction to the rules and regulations of the office and explained which part of the office I could and could not access and then I identified the organizational structure, and on Day 2 I discovered the office sections and staff roles and created an organizational structure that allowed me to distinguish officials, staff and visitors, which was very important for analysing who uses which language with whom. The office worked with written material such as public notices, forms, letters and Deh forms, and with daily dealings at the counter.

I did not record a formal mission statement, vision or list of programmes during the placement, so I do not state them here. I describe the office only as I observed it.

3. Job description/Tasks performed

In the Non-Teaching/Institutional component that ran for Days 1–12. On days 1 and 2 I began with introduction and observation. On Days 3 and 4, I observed the public dealings with staff and noted how language was used with different visitor, including formal and informal language use and examples of code-switching. On the day 5, with permission, I analyzed public notices, forms and letters and started a vocabulary notebook. On Day 6, I studied how an administrator explains

technical terms to the public. On Day 7, I assisted my supervisor with office communication and paperwork that was not private. On Day 8, I combined the vocabulary notebook and I verified its entries with my supervisor. On Days 9 to 12, I carried out multilingual observation that defined which language is used by whom, where and when, focusing on code-switching and its roles , comparing languages , and connecting it with my findings.

In the Teaching component that ran from Days 13–16 in that period I taught in the classroom. On Day 13, I first organized an informal discussion with students about their needs and previous knowledge then I introduced language skills and parts of speech to the lower class, and language and society, language imperialism and language and gender to the higher class. On Day 14, on the students' request, I discussed language, power, gender, history and identity. On Day 15, I introduced Second Language Acquisition theories (Behaviourism, Innatism and Sociocultural Theory), taught sociolinguistics in a separate class, and taught tenses with a table to the lower class. On Day 16, I introduced Critical Pedagogy through Freire's Banking Model and used task-based activities.

The tools I used were a terminology notebook, an organogram, observation notes, board-based explanations and tables, and the daily and reflective logbooks.

4. Learning Outcomes and Skills

This internship journey developed several skills. Observing and recording language use became more organized then I moved from noting that a switch occurred to noting what caused it. I learned to check technical terms against what was actually said. I learned to adapt lessons to learners' previous knowledge and requests, to explain theory via examples and visuals, and to encourage participation through tasks.

This internship let me connect course theory with practice. Audience design (Bell) explained why officials addressed visitors differently from colleagues. Fishman's idea of domains helped me organise language choice by setting, topic and participants. Rahman's discussion of power and language helped me see why formal Urdu and English dominate official writing in a mainly Sindhi setting. Code-switching appeared as a useful tool, mainly for making things clear, and sometimes for connection. Politeness and face, adjustments, and a range of formality between written notices, public talk and staff talk all became clearer.

In teaching, I connected needs analysis, separated instruction, critical language awareness, Communicative Language Teaching, Task-Based Language Teaching and scaffolding to my lessons. Freire's Banking Model and the idea of raising awareness showed me the difference between explaining a method and giving learners a chance to use it. The soft skills I developed were communication with different audiences, adaptability in the classroom, and reflective practice.

5. Challenges Faced:

The first gap between theory and practice was that of written and oral languages. The notices were full of bulky repetitions from Persian and Arabic vocabulary, and some phrases could only

be explained orally at the counter to enable actions. I saw this gap being bridged in real time by staff members explaining them orally for visitors.

My method was under several challenges. The problem of making a generalisation from a small number of observations required that I treat my findings as suggestive, not conclusive. At the beginning of the process, I noticed the occurrence of code-switching, but the reason behind it was not clear. So, I started to write down the reason why code switching occurred. In some cases, the words in my notebook were my own simplified versions, not the exact words used in the office; therefore, I verified them with my supervisor.

Teaching presented other challenges as well. There was no definite timetable for the classes, so I had to ask students about their needs. History, ideology, and identity were sensitive topics to which I had to give proper attention and illustration. I learned from experience that tasks must have goals and results; appreciation doesn't mean learning.

6. Conclusion

In the internship, I was able to apply knowledge in Applied Linguistics in two different environments - public office environment and the classroom. In the former, I learned that the language used depends on the audience and the level of formality and conventionality of the organization but not personal preference. In the latter, I observed that effective teaching begins by listening to the learners. Over 16 days and 90 hours, my logs and reflections connected the observations to concepts.

In future, I would make my coding clear from the start, confirm key terms on the day I record them, and create tasks with clear objectives. I am grateful to my supervisors and my university coordinator for their guidance.
